

Visual Interdisciplinary Progress Notes

Visual Progress Notes is an interdisciplinary system for recording progress notes. All disciplines record their notes on-line, and all notes for a resident can then be viewed together across all disciplines.

Entering Progress Notes. When progress notes are created they are associated with a particular discipline and person. The interdisciplinary progress notes can then viewed or printed for either a single discipline or across all disciplines (see fig. 1).

Sorting and Filtering. Progress notes for a resident may be sorted by date, author, or discipline. In addition, notes may be filtered to display only those that were entered by a specific discipline or person.

Integration. Progress notes created anywhere in the CHARTS Visual suite, such as *Visual Therapy Tracking*, automatically flow through and become incorporated into the interdisciplinary *Visual Progress Notes*.

Printing. Interdisciplinary progress notes, for any range of residents or disciplines, may be printed at any time. Printed reports may also be exported as Word, Excel or Crystal documents.

Language and Platform. The *Visual Progress Notes* system is a point-and-click fully integrated GUI Windows based system that operates on Microsoft NT networks and attached Windows or NT PCs.

The system is a Web-based solution operating within the Microsoft Internet Explorer. Active Server Pages combining HTML, reusable ActiveX components, Java and Visual Basic scripting provide a graphical point-and-click user interface. The data-base is Microsoft's SQL Server and printing of reports is accomplished with the user-friendly Crystal Reporting.
